INTEGRATIVE MEDICINE RESEARCH

General Information

Integrative Medicine Research (IMR) is the official journal of the Korea Institute of Oriental Medicine. The journal is a quarterly, single-blind peer-reviewed, subsidized open access journal focused on evidence-based scientific research in integrative medicine, traditional medicine, and complementary and alternative medicine. The journal aims to provide new research perspectives on holistic integrative health, innovative health preservation approaches, and convergence for clinical medicine and biomedical sciences.

IMR aims to publish high-quality papers that are of high interest to an international readership, consisting of researchers, clinical practitioners, and others concerned with clinical practice, research methodology, and education and policy development in integrative medicine. The current focus of the journal is globally diversified and IMR welcomes papers of international research collaborations and papers from all over the world.

IMR publishes articles of basic science research and clinical research, including randomized controlled trials, intervention studies, cohort studies, observational studies, diagnostic test accuracy and reliability studies, qualitative and mixed method studies, animal studies, systematic reviews and narrative reviews. The types of publications considered are review articles, original articles, letters to the editor, commentaries, and short communications relating to integrative medicine.

The journal was launched in December 2012 and its abbreviated title is *Integr Med Res*.

Guide for Authors

Integrative Medicine Research (IMR) is the official journal of the Korea Institute of Oriental Medicine. The journal is a quarterly, single-blind peer-reviewed, subsidized open access journal focused on evidence-based scientific research in integrative medicine, traditional medicine, and complementary and alternative medicine. The journal aims to provide new research perspectives on holistic integrative health, innovative health preservation approaches, and convergence for clinical medicine and biomedical sciences.

IMR aims to publish high-quality papers that are of high interest to an international readership, consisting of researchers, clinical practitioners, and others concerned with clinical practice, research methodology, and education and policy development in integrative medicine. The current focus of the journal is globally diversified and IMR welcomes papers of international research collaborations and papers from all over the world.

IMR publishes articles of basic science research and clinical research, including randomized controlled trials, intervention studies, cohort studies, observational studies, diagnostic test accuracy and reliability studies, qualitative and mixed method studies, animal studies, systematic reviews and narrative reviews. The types of publications considered are review articles, original articles, case reports, short communications, letters to the editor, commentaries, and tutorials relating to integrative medicine.

IMR is indexed and archived in Science Citation Index Expanded (SCIE), Scopus, PubMed Central (PMC), Embase, Allied and Complementary Medicine Database (AMED), Cumulative Index to Nursing and Allied Health Literature (CINAHL), Directory of Open Access Journals (DOAJ), Korea Citation Index (KCI), ScienceDirect, and Google Scholar.

To receive table of contents by email, please register at:
www.imr-journal.com

1. Manuscript submission

Manuscripts for *Integrative Medicine Research* should be submitted online via Editorial Manager, www.editorialmanager.com/IMRES/. For editorial questions, please contact the editorial office at: imr@kiom.re.kr; +82-42-868-9392. For technical issues with the system, please contact Elsevier's Support Center at: <https://service.elsevier.com/app/home/supporthub/publishing/>

There are no article processing charges or publication fees.

Important information

- Articles should be prepared and submitted in Microsoft Word (*.doc or *.docx). Manuscripts must be typed in English, double-spaced and 11 or 12-point type, using 1 inch (2.54 cm) margins. All pages must be numbered consecutively.

- ORCID id is mandatory.

- Manuscript file should include a title page, manuscript text, references, tables, and figure legends as a single file, with each table on a new page after references, followed by figure legends.

Manuscript template can be downloaded from https://www.elsevier.com/_data/promis_misc/IMRES_Manuscript_template.doc

- Authors are required to be in compliance with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals, which are compiled by the International Committee of Medical Journal Editors (ICMJE), available at www.icmje.org.

Please ensure that the following submission documents and information are also included:

- (1) Cover letter: It must include the corresponding author's name, address, telephone number, and e-mail address.

- (2) Manuscript statements (all mandatory) : author contributions (CRediT), conflict of interest, funding, ethical statement, and data availability.

- (3) Relevant reporting checklist : Authors are required to adhere their manuscripts to recognized reporting guidelines (refer to 3.1 Reporting guidelines)

- (4) Articles covering the use of human samples in research and human experiments (including surveys) must be approved by relevant research ethics review committees and their approval should be indicated in the manuscript.

- (5) Articles where human subjects can be identified in descriptions, photographs or pedigrees must be accompanied by a statement of informed consent to publish (in print and online).

- (6) Clinical trials are recommended to register a primary national clinical trial registration site such as www.clinicaltrials.gov, <http://nccr.cdc.go.kr/cris>, or other sites accredited by WHO or the International Committee of Medical Journal Editors.

- (7) Articles covering the use of animals in experiments must be approved by the relevant authorities.

- (8) Where material has been reproduced from other copyrighted sources, the letter(s) of permission from the copyright holder(s) to use the copyrighted sources must be supplied.

2. Types of articles

2.1. Editorials

Editorials are invited articles or comments concerning a specific paper in the Journal or a topical issue in the field. Although editorials are normally invited or written by an Editor, unsolicited editorials may be submitted.

2.2. Commentaries

These are short, opinion articles which focus on current research topics and highlight articles of interest previously published elsewhere. Commentaries are generally invited by the Editors, but interested contributors with unsolicited commentaries are encouraged to submit them.

2.3. Review articles

These should aim to provide the reader with a balanced overview of an important and topical subject within the Journal's aims and scope. The review should have a clear methodology of reviewing the contents for systematic reviews, narrative reviews and any other types of reviews. Most reviews are solicited by the editors, but unsolicited submissions may also be considered for publication.

2.4. Original articles

These may be clinical trials, intervention or diagnostic test accuracy studies, laboratory and animal studies, cohort studies, cost-effectiveness analyses, surveys, and historical, social, or policy studies on integrative medicine and health, which represent new and significant contributions to the field.

2.5. Study protocols

These describe detailed plans for conducting clinical studies, including randomized controlled trials, observational studies

(cohort, case-control, cross-sectional studies), and other clinical trials. Study protocols should include the purpose and methodology of the study as well as the importance or significance of the study. The journal only publishes registered studies in national clinical trial registries.

2.6. Short communications

These are short reports of significant research. Short communications may include up to 2 figures or tables.

2.7. Case reports

These are short discussions of a case or case series with unique features not previously described that make an important teaching point or scientific observation. Case reports should include the significance and purpose of the case presentation, the diagnostic methods of the case, the key data, and brief comments and suggestions with regard to the case. Refer to the CARE guidelines and submit CARE checklist with the case report manuscript. Only the well-reported and informative case studies which follow the CARE guideline are considered for publication. Informed consent and/or IRB approval must be disclosed in the case report.

2.8. Letters to the editor

These include brief constructive comments concerning previously published articles in the journal or very brief research reports. Letters are edited, sometimes extensively, to sharpen their focus. They may be sent for peer review at the discretion of the Editors.

3. Before you begin

3.1. Reporting guidelines

Authors are required to adhere their manuscripts to recognized reporting guidelines where appropriate, and submit a relevant, completed checklist. Depending on the research design used, more specific extensions may be necessary. Below is the list of sample reporting guidelines:

- Randomised controlled trials - **CONSORT**
- Systematic review or meta-analysis - **PRISMA**
- Observational cohort, case control and cross sectional studies - **STROBE**
- Case reports - **CARE**
- Protocols for RCTs - **SPIRIT**
- Protocol for systematic reviews or meta-analysis - **PRISMA-P**
- Animal research - **ARRIVE**

For other reporting guidelines, authors may refer to the Equator Network (Enhancing the QUALity and Transparency Of health Research, <http://www.equator-network.org/>).

3.2. Ethics in publishing

For information on ethics in publishing and ethical guidelines for journal publication, refer to <https://www.journals.elsevier.com/integrative-medicine-research/policies-and-guidelines>

3.3. Human and animal rights

If the work involves the use of human subjects, authors should ensure that the work described has been carried out in accordance with the World Medical Association Declaration of Helsinki - *Ethical Principles for Medical Research Involving Human Subjects*, <https://www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/>, the International Committee of Medical Journal Editors Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals, <http://www.icmje.org/recommendations/>. Authors should include a statement in the manuscript that informed consent and an approval by the institutional review board (ethics committee) were obtained for research with human subjects. The IRB approval number should be stated.

All animal experiments should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Institutes of Health guide for the care and use of Laboratory animals (NIH Publications No. 8023, revised 1978). The authors should clearly indicate in the manuscript that such guidelines have been followed and an approval by the animal ethics committee has been obtained. All animal studies need to ensure they comply with the ARRIVE guidelines.

3.4. Submission declaration and verification

Submission of an article implies that the work described has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see <https://www.elsevier.com/sharingpolicy>), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere including electronically in the same form, in English or in any other language, without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service CrossCheck <https://www.elsevier.com/editors/plagdetect>.

3.5. Changes to authorship

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal editors. To request such a change before acceptance, the editors must receive the following from the corresponding author: (a) reason for the change in author list and (b) written confirmation (letter signed by all authors) that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the editors consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any reasonable requests approved by the Editors will result in a corrigendum.

3.6. Copyright

Published manuscripts become the permanent property of Korea Institute of Oriental Medicine, and must not be published elsewhere without written permission. All articles published in the Journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article, as well as translation rights. No part of this publication may be reproduced, stored in any retrieval system, or transmitted in any form or by any means, electronic, mechanical, by photocopying, recording, or otherwise, without prior written permission from Korea Institute of Oriental Medicine. A copyright transfer form should be signed by all co-authors. On behalf of all the contributing authors, the corresponding author must confirm and agree to transfer their copyright online through an email instead of submitting the copyright transfer agreement. All other contributing authors may also confirm in the same manner.

3.7. Open access

Every peer-reviewed article appearing in this journal will be published open access. This means that the article is universally and freely accessible via the internet in perpetuity, in an easily readable format immediately after publication. The author does not have any publication charges for open access. Korea Institute of Oriental Medicine will pay to make the article open access. A CC user license manages the reuse of the article (see <http://www.elsevier.com/openaccesslicenses>). All articles will be published under the following license:

Creative Commons Attribution - Non Commercial - No Derivatives (CC BY-NC-ND): for non-commercial purposes, lets others distribute and copy the article, and to include in a collective work (such as an anthology), as long as they credit the author(s) and provided they do not alter or modify the article.

3.8. Author contributions

The journal uses the CRediT taxonomy to define author contributions. Each author on a paper may have one or more CRediT contribution roles. CRediT author contribution statements should be provided during the submission. For more details on CRediT, see <https://www.elsevier.com/authors/journal-authors/policies-and-ethics/credit-author-statement>.

3.9. Conflict of interest

The corresponding author must inform the editor of any potential conflicts of interest that could influence the author's interpretation of the data or influence the acceptance of the manuscript. Examples of potential conflicts of interest are financial support from or connections to pharmaceutical companies, political pressure from interest groups, and academically related issues. Conflict of interest statements will be published at the end of the text of the article with other disclosures, before the 'References' section. Please consult the COPE guidelines (www.publicationethics.org) on conflict of interest. Even when there is no conflict of interest, it should also be stated as "The authors have no conflict of interest to declare."

3.10. Funding

Any financial support (funds) received for the study must be stated at the end of the manuscript. If the sponsor took any role in the following, then briefly describe the role: in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source had no such involvement then this should be stated. Even when no funding was received, it should be stated as "none."

3.11 Ethical statement

Studies on humans or animals require relevant ethics committee approval and the approval number should be stated. For human subjects, an informed consent should also be retained by the author and documented in the paper. In exceptional circumstances (for example if a legal issue arises), the journal may request copies of the consents or evidence that such consents have been obtained. Unless the authors have written permission from the patient, the personal details of any patient included in any part of the article and in any supplementary materials must be removed before submission. For studies not involving human or animal, it should be stated that no ethics approval was needed.

3.12 Data availability

To foster transparency, stating the availability of the data is mandatory for the journal. If authors choose to publish their data, the data can be placed in a repository of their choice and its DOI can be stated in the data availability statement. Other options, for example, are to state that "The data will be made available upon request" or "The data that has been used is confidential and can not be shared." With the data statement, the authors can be transparent about the data they used in an article.

3.13 Supplementary material

Supplementary material such as raw or processed data, applications, images, and sound clips, can be published with the manuscript. Please supply a concise, descriptive caption for each supplementary file. Supplementary files will be published in the online version, exactly as they are received.

3.14. English proofing

Articles should be written in English (using American English spelling) and the English proofing should be taken before submission by the author.

3.15. Submission

Submissions are submitted and reviewed online using the Editorial Manager. The system automatically collects some information from the uploaded files so that the authors do not have to manually input all the information. All the files are converted in to a single PDF file to be used in the review process. Authors should check the PDF and submission details on the system as technical errors may occur. Editable files (e.g., Word) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail which can also be checked on the Editorial Manager.

4. Manuscript Preparation

The manuscript file should include the following parts:

- Title page (refer to 4.1.)
- Abstract (refer to 4.2.)
- Keywords (refer to 4.3.)
- Main text: 1. Introduction, 2. Methods, 3. Results, 4. Discussion
- Acknowledgment (if any)
- Author contributions (mandatory; refer to 3.8.)
- Conflict of interest (mandatory; refer to 3.9.)
- Funding (mandatory; refer to 3.10.)
- Ethical statement (mandatory; refer to 3.11.)
- Data availability (mandatory; refer to 3.12.)
- Supplementary material (if any; refer to 3.13)
- References
- Tables (Tables should be placed at the end of the manuscript.)
- Figure legend

4.1. Title page

The title page should be compiled to the manuscript as a single file. The title page should include: category of paper, article title (full title and short running title), full names of all authors, institutions of authors (indicate all affiliations with a superscripted lowercase number after the author's name and in front of the appropriate affiliation), all contributing authors' ORCID id numbers, and the corresponding author details (name, full address, ORCID number, and e-mail). The journal allows up to two co-corresponding authors which should be indicated on the title page.

4.2. Abstract

An abstract is required for the following article categories: Review Article, Original Article, Case Report, Short Communication, and Study Protocol. Abstracts should be no more than 250 words in length. Abstracts for all types of articles should be structured, with the section headings: Background, Methods, Results, and Conclusion. For Study Protocols, abstract section headings should be: Background, Methods, Discussion, and Trial registration.

4.3 Keywords

3-5 relevant keywords are required for all articles. For selecting keywords, authors may refer to the the Medical Subject Headings (MeSH) at the U.S. National Library of Medicine, <https://meshb.nlm.nih.gov/search>.

4.4. Main text

The text for Original Articles, for example, should include the following sections: Introduction, Methods, Results, and Discussion. The Introduction should be as concise as possible without subheadings. The Methods section should be sufficiently detailed. Subheadings may be used to organize

the Methods, Results and Discussion. Limitations and conclusions should be included in Discussion.

4.4.1. Abbreviations

Where a term/definition is continually referred to (i.e. ≥ 3 times in the text), write it in full when it first appears, followed by the subsequent abbreviation in parentheses (even if it was previously defined in the abstract); thereafter, the abbreviation can be used.

4.4.2. Scientific names

A formal scientific name conforming to the International Code of Nomenclature should be adhered to. For genes, standard international nomenclature for genes should be adhered to. For human genes, use genetic notation and symbols approved by the HUGO Gene Nomenclature Committee (www.genenames.org/) or refer to PubMed (www.ncbi.nlm.nih.gov/).

4.4.3. Units

The International System of Units (SI) must be used, with the exception of blood pressure values which are to be reported in mmHg. Please use the metric system for the expression of length, mass, volume, etc.

4.5. References

Authors are responsible for the accuracy and completeness of their references and for correct text citation.

4.5.1. In the main text, tables and figure legends

- References should be identified using superscripted numbers, in numerical order, and be placed after punctuation.
- References cited in tables or figure legends should be included in sequence at the point where the table or figure is first mentioned in the main text.
- Do not cite abstracts unless they are the only available reference to an important concept.
- Uncompleted work or work that has not yet been accepted for publication (i.e., "unpublished observation", "personal communication") should not be cited as references.

4.5.2. In the references list

- References should be limited to those cited in the text and listed in the order in which they appear in the text.
- References for journal articles should include, in order, authors' last name and initials, article title, abbreviated journal title, year, volume and inclusive page numbers. When there are more than 6 authors, the last names and initials of the first 6 authors should be included, followed by "et al." Abbreviated journal titles should conform to those used in MEDLINE.
- If citing a website, provide the author information, article title, website address and the date you accessed the information.
- Reference to an article that is in press must state the journal title, digital object identifier (DOI), and, if possible, the year and volume.

Examples are given below.

Standard journal article:

Bisdas T, Pichlmaier M, Wilhelmi M, Bisdas S, Haverich A, Teebken O. Effects of the ABO-mismatch between donor and recipient of cryopreserved arterial homografts. *Int Angiol* 2011;30:247-55.

Journal supplement

Kaplan NM. The endothelium as prognostic factor and therapeutic target: what criteria should we apply? *J Cardiovasc Pharmacol* 1998;32(Suppl 3):S78-80.

Journal article not in English but with English abstract

Kawai H, Ishikawa T, Moroi J, Hanyu N, Sawada M, Kobayashi N, et al. Elderly patient with cerebellar malignant astrocytoma. *No Shinkei Geka* 2008;36:799-805. [In Japanese, English abstract]

Book with edition

Bradley EL. *Medical and surgical management*. 2nd ed. Philadelphia: Saunders; 1982, p. 72-95.

Book with editors

Letheridge S, Cannon CR, editors. *Bilingual education: teaching English as a second language*. New York: Praeger; 1980.

Book chapter in book with editor and edition

Greaves M, Culligan DJ. Blood and bone marrow. In: Underwood JCE, editor. *General and systematic pathology*. 4th ed. London: Churchill Livingstone; 2004, p. 615-72.

Electronic publications

Duchin JS. Can preparedness for biological terrorism save us from pertussis? *Arch Pediatr Adolesc Med* 2004;158(2). Available from: <http://archpedi.ama-assn.org/cgi/content/full/158/2/106>. Accessed June 12, 2004.

Smeeth L, Iliffe S. Community screening for visual impairment in the elderly. *Cochrane Database Syst Rev* 2002(2):CD001054. Doi:10.1002/14651858.CD1001054.

Item presented at a meeting but not yet published

Khuri FR, Lee JJ, Lippman SM. Isotretinoin effects on head and neck cancer recurrence and second primary tumors. In: *Proceedings from the American Society of Clinical Oncology*, May 31-June 3, 2003; Chicago, IL. Abstract 359.

Item presented at a meeting and published

Cionni RJ. Color perception in patients with UV- or bluelight filtering IOLs. In: Symposium on cataract, IOL, and refractive surgery. San Diego, CA: American Society of Cataract and Refractive Surgery; 2004. Abstract 337.

Thesis

Ayers AJ. *Retention of resin restorations by means of enamel etching and by pins [MSD thesis]*. Indianapolis: Indiana University; 1971.

Website

American Association of Oral and Maxillofacial Surgeons. *Wisdom teeth*. AAOMS Website. www.aaoms.org/wisdom_teeth.php. Published 2008. Accessed September 25, 2010.

Company/manufacturer publication/pamphlet

Eastman Kodak Company, Eastman Organic Chemicals. Catalog no. 49. Rochester, NY: Eastman Kodak; 1977, p. 2-3.

4.6. Acknowledgments

General acknowledgments for consultations, statistical analysis, etc., should be listed after main body of text, before the references, including the names of the individuals involved. (All financial and material support for the research and the work should be stated under Funding.)

4.7. Tables

Tables are numbered consecutively, in the order of their citation in the text. Table legend example: **Table 1** Demographic characteristics of patients. [note: "Table 1" in bold font; end period after legend]. Shortening of some words inside table (NOT in table legend): year(s) - yr; month(s) - mo; day(s) - d; hour(s) - hr; minute(s) - min; second(s) - sec; and · &.

Use en dashes for empty entries. Footnotes are indicated using these symbols (in order of appearance): *, †, ‡, §, ||, ¶, ** [note: when > 10 footnotes, use superscripted lowercase letters]. Abbreviations used in the table, even when already defined in the text, should be defined and placed after the footnotes and presented like this example: CT, computed tomography; MRI, magnetic resonance imaging. [note: the use of "," with a space on either side, semi-colon to separate, and a period after the last] Tables should be placed at the end of the manuscript.

4.8. Figures

Figure legends should be submitted for all figures and should be brief and specific and placed on a separate sheet after the reference section. Figure legend example: **Fig. 1.** Demographic characteristics of patients. Figures must be in numerical order using Arabic numerals in the order of their citation in the text. Figures should be uploaded as separate files, not embedded in the manuscript file.

Regardless of the application used, when your electronic artwork is finalized, please "save as" or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

- EPS: Vector drawings. Embed the font or save the text as "graphics".
- TIFF: Color or grayscale photographs (halftones) - use a minimum of 300 dpi.
- TIFF: Bitmapped line drawings-use a minimum of 1000 dpi.
- TIFF: Combination of bitmapped line/half-tone (color or grayscale) - use a minimum of 600 dpi.
- DOC, XLS or PPT: If your electronic artwork is created in any of these Microsoft Office applications, please supply "as is".

Please do not:

- Supply files that are optimized for screen use (like GIF, BMP, PICT, WPG) as the resolution is too low;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

5. Review and action

5.1. The editorial and peer review process

- As a general rule, the receipt of a manuscript will be acknowledged within 1 week of submission; authors will be provided with a manuscript reference number for future correspondence. If an acknowledgment is not received in a reasonable period of time, the author should contact the Editorial Office (imr@kiom.re.kr).
- Submissions are reviewed by the Editorial Office to ensure that it contains all parts. Submissions will be rejected if the author has not supplied all the materials and documents as outlined in the Journal's Guide for Authors.
- Manuscripts are then reviewed by the Editor, who make an initial assessment. If the manuscript does not appear to be of sufficient merit or is not appropriate for the Journal, the manuscript will be rejected without peer review.
- All other manuscripts are sent to 2 or more expert single-

blind peer review. Single-blind peer review is a common form of peer review. As the journal adheres single-blind peer review, the identities of the reviewers are anonymous, but the authors' names and affiliations are open to the reviewers. Reviewers should declare any conflict of interest and should not reveal any manuscript details which is confidential.

- Authors will usually be notified within 12 weeks of the initial acknowledgment of whether the manuscript is accepted for publication, rejected, or subject to revision before acceptance. However, do note that delays are sometimes unavoidable.

6. After Acceptance

6.1. Use of the Digital Object Identifier

The Digital Object Identifier (DOI) may be used to cite and link to electronic documents. The DOI consists of a unique alpha-numeric character string which is assigned to a document by the publisher upon the initial electronic publication. The assigned DOI never changes. Therefore, it is an ideal medium for citing a document, particularly 'Articles in press' because they have not yet received their full bibliographic information. For example, an article in Integrative Medicine Research is given the following DOI: <https://doi.org/10.1016/j.imr.2012.09.002>.

6.2. Proofs

A Proof Central link will be sent by e-mail to the corresponding author so that authors can make corrections online or download PDF proofs for corrections. Corresponding authors will receive an e-mail with a link to Elsevier journal's online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, the authors can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing the authors to directly type their corrections, eliminating the potential introduction of errors. All instructions for proofing will be given in the e-mail. The publisher and the journal will do everything possible to get the accepted article published quickly and accurately. Please use the proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are returned in one communication. Please check carefully before submitting the corrections, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely the authors' responsibility.

7. Author inquiries

- You can track your submitted article at: <https://www.elsevier.com/track-submission>
- You can track your accepted article at: <https://www.elsevier.com/trackarticle>
- You are welcome to contact Customer Support at: <https://support.elsevier.com>
- You are also welcome to contact the Editorial Office at: imr@kiom.re.kr

IMR welcomes your paper to be considered for publication!

- Open access
- No article processing charges or publication fees
- Fast online publication (article-based publishing)
- Journal homepage: www.imr-journal.com
- Online submission system: www.editorialmanager.com/imres

To find out more about the journal and to subscribe for free alerts (table of contents), please visit the journal's homepage and register at <http://www.imr-journal.com>
